

LLM Quizz

1. What does LLM stand for in the context of AI?

- A. Large Language Model
- B. Linear Learning Model
- C. Logic Language Machine
- D. Linguistic Learning Method

2. Which of the following is a common use of LLMs?

- A. Image recognition
- B. Natural language processing
- C. Data encryption
- D. Hardware optimization

3. Which of the following is an example of an LLM?

- A. GPT-3
- B. ResNet
- C. SVM
- D. KNN

4. What is a key feature of LLMs?

- A. They require minimal training data
- B. They can generate human-like text
- C. They only work in English
- D. They are hardware dependent

5. Which technique is commonly used to train LLMs?

- A. Supervised learning
- B. Reinforcement learning
- C. Unsupervised learning
- D. Semi-supervised learning

Answers

- 1. A ☒ LLM refers to Large Language Model, which is designed to understand and generate human language.
- 2. B ☒ LLMs are primarily used for natural language processing tasks.
- 3. A ☒ GPT-3 is a well-known example of a Large Language Model.
- 4. B ☒ LLMs are designed to generate text that resembles human writing.
- 5. C ☒ LLMs are often trained using unsupervised learning on large text corpora.
